

* Large Language Model

(LLM - Generative AI)

Which company create 1st LLM model -- openai (chatgpt)

LLM model -- 2 types

- text based model
(model generate text)
- multi model (sota)
(model generate image also along with text)

Why the point large?

Large because trained through large amount of data present in the internet.

* Ollama

It is a tool that lets you run the LLM models locally on your computer

Ollama cannot generate images it can only generate text.

To generate image we need to download or pull ollama pull gemma 3-vl:2b

→ Takes more ram.

STEPS

In cmd write

① > ollama

② > ollama pull gemma3:270m

③ > ollama run gemma3:270m

>>> hi how are you

→ Prompt given by us

I am doing well, thank you for asking! How are you?

* To come out of this prompt we can use Ctrl+Z

STEPS

① ollama - download and install

② ollama → model select based on your system config download the model

③ ollama pull gemma3:270m (run in 4gb ram as well)
ollama pull gemma3 (4gb ram it does not work)

④ ollama run gemma3:270m

⑤ Congrats we built Ollama model

ollama ls

Shows / lists the

ollama pull

⇒ To install a model

ollama rm

⇒ To uninstall a model

TRY TO RUN

it will hang

only one model at a time otherwise

23772

ollama pull llama3.1:8B (this is the command to run)
